"Use of the newer LT devices could result in more than 10,000 additional lives saved each year."

- Henry E. Wang, M.D., M.S., lead author of the study

Results published in Journal of American Medical Association (JAMA) in 2018

LTS-D provides superior outcomes compared to endotracheal intubation in OHCA (Out-of-Hospital Cardiac Arrest)
Results of the Pragmatic Airway Resuscitation Trial show the LTS-D™ Laryngeal Tube (LT) to be safer and produce better outcomes than the gold standard of endotracheal intubation (ETI) in OHCA (Out-of-Hospital Cardiac Arrest).
